

# IXSeg2SegY

Simply the best seismic processing utility for the money

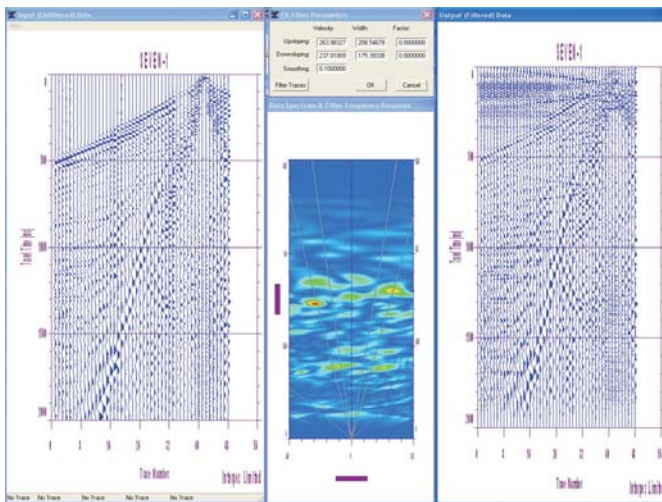

Trace display properties allow for Vertical or Horizontal display, variable area, break picks, display vs. trace number or position, timing lines and several trace gaining methods.

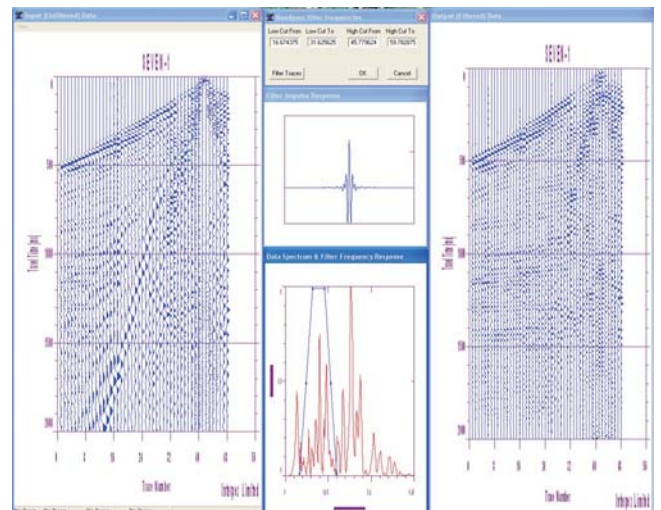

Geometry creation supports constant spacing or tapered spreads.

Velocity filtering shows input traces, interactive spectrum graphic with filter, numerical filter specification and output

Bandpass filtering shows input traces, interactive spectrum graphic with filter, filter impulse response, numerical filter specification and output traces.
